

The graph illustrates the growth of three fungal strains over a 12-day period. The y-axis represents Mycelia content in g/L, ranging from 0 to 14. The x-axis represents the cultivation period in days, ranging from 0 to 14. *A. niger* (circles) shows the most rapid growth, followed by *A. nidulans* (squares). *A. terreus* (triangles) shows minimal growth throughout the period.

A line graph showing the mycelia content (g/L) of *Aspergillus niger* over a 12-day cultivation period for three different strains. The y-axis represents 'Mycelia content (g/L)' ranging from 0 to 16. The x-axis represents 'Cultivation period (days)' ranging from 0 to 14. The three strains are represented by different symbols: triangles (highest growth), squares (medium growth), and circles (lowest growth). All strains start at approximately 0.2 g/L at day 0.

Cultivation period (days)	Strain (Triangle) (g/L)	Strain (Square) (g/L)	Strain (Circle) (g/L)
